

CISB5123 Text Analytics Sem 2 2024/2025

Project Part 1 Data Collection & Preprocessing (15%)

This is a **GROUP** project, where each **GROUP** must consist of a *minimum of FOUR (4)* students, and a *maximum of FIVE (5)* students.

Instructions:

1. **Identify a real-world text analytics problem.**

Example topics:

- Sentiment analysis on campus dining reviews
- Social media discussions on a trending event
- Customer feedback on a product/service
- Topic modeling in academic research papers

2. **Define the project scope.**

- What problem are you addressing?
- What insights do you aim to extract?
- Who are the data sources/audience?
- Are there ethical considerations? (Data privacy, bias, consent)

3. **Collect and describe your dataset.**

- Where did you get your data? (Web scraping, APIs, surveys, text documents)
- How large is the dataset? (Number of records, file format)
- What are potential data limitations?

4. **Perform text preprocessing.**

- What steps did you apply? (Text cleaning, tokenization, stop word removal, stemming/lemmatization)
- Why are these steps necessary for your dataset?
- What challenges did you face in preprocessing?

Deliverables:

- Python Notebook (Including code for data collection & preprocessing, well-commented) - File: Part1_GroupLeaderID.ipynb
- Slides Presentation (Explaining project scope, data, and preprocessing techniques, max 5 minutes) - File: Part1_GroupLeaderID.pptx
